Letter of Approval

This is to certify that this project prepared by **SAGAR BHATTARAI** entitled **INTERNSHIP** in partial fulfillment of the requirements for the degree of Bachelor in Computer Application has been evaluated. In our opinion it is satisfactory in the scope and quality as a project for the required degree.

..... Supervisor Suresh Raj Sharma Department of Computer Application Bharatpur-10, Chitwan	 Director Soba Raj Paudel Department of Computer Application Bharatpur-10, Chitwan
..... Mentor Amrit Chapagain LamiraiTech Pvt. Ltd. Kawasoti-02, Nawalpur	 External Examineer

Acknowledgement

I would like to express my sincere gratitude to my supervisor, Mr. Suresh Raj Sharma, for his invaluable guidance and support throughout my work at LamiraiTech Pvt. Ltd Company. I would also like to thank my coordinator, Mr. Sobaraj Poudel, for his constant encouragement and assistance. I am grateful to the owner, Mr. Bikram Rana, for providing me with the opportunity to work at this esteemed organization. My mentor, Mr. Amrit Chapagain, has been a great source of inspiration and I appreciate his wisdom and insights. I would also like to thank my team leader, and my mentor, for their guidance and support. I am truly grateful to each and every one of them for their contributions towards my professional development.

Abstract

This internship was designed to provide hands-on experience in full-stack web development and the enhancement of digital platforms through modern technological frameworks. The internship focused on developing and maintaining web applications—such as e-commerce platforms and management systems—that serve as essential tools for users to access services, manage data, and foster seamless communication. The intern was responsible for architecting backend solutions, designing responsive frontend interfaces, and implementing robust database management practices.

Key tasks included developing dynamic user interfaces using React, building scalable RESTful web services with Java Spring Boot, and managing data integrity within MySQL databases. The intern also worked on integrating effective search engine optimization (SEO) strategies to improve site visibility, implementing secure coding practices, and performing regular system testing to ensure optimal performance and responsiveness across various devices. Additionally, the use of modern development tools allowed for efficient project tracking, version control, and the deployment of complex features such as online inquiry management and secure data processing.

Through this internship, the intern gained valuable skills in full-stack development, API integration, database management, web security, and responsive design principles. This experience not only enhanced the intern's technical proficiency in industry-standard frameworks but also provided critical insight into the operational needs and lifecycle of professional web applications. Overall, the internship was a significant learning opportunity that bridged the gap between academic theory and real-world software engineering, effectively preparing the intern for a professional career in web development.

Keywords: *Full-Stack Development, React, Java Spring Boot, SEO Optimization, Web Security, Responsive Design*

Chapter 1: Introduction

1.1 Introduction

This internship report formally documents my twelve-week professional experience as a Full-Stack Developer Intern at Lamirai Tech Pvt. Ltd.. The internship period spanned from April 5, 2026, to June 27, 2026, during which I was actively engaged in the design, development, and implementation of full-stack software solutions. My role involved working closely with a team of developers to bridge the gap between frontend user interfaces and backend server logic, specifically utilizing the React framework for frontend development and Java Spring Boot for robust backend architecture.

Throughout this period, I contributed to key company projects including the YetraSewa platform, the FoodCourt project, and the Office Management System. The primary objective of this internship was to fulfill the practical requirements of the Bachelor in Computer Application (BCA) program while gaining hands-on exposure to industry-standard software development workflows. This involved mastering the implementation of the controller-service-repository design pattern within Java Spring Boot and gaining practical experience in consuming RESTful APIs using Axios to facilitate dynamic data rendering.

Beyond technical proficiency, this experience allowed me to gain a deeper understanding of the end-to-end development lifecycle, from initial requirement analysis and local development environment setup to testing and project handover. I also enhanced essential soft skills, such as collaborative teamwork, effective communication during daily meetings, and the ability to adapt to mentor feedback for code optimization. This report provides a detailed account of the technical methodologies applied, the collaborative professional environment, and the practical skills acquired during my tenure at the organization.

1.2 Problem Statement

The problem that this internship report aims to address is the lack of seamless integration and scalable architecture in full-stack web applications within the professional development environment at LamiraiTech. As I worked on projects such as the Yetra Sewa platform, the FoodCourt system, and the Office Management System, it became evident that bridging the gap between a robust Java Spring Boot backend and a responsive React frontend presents significant hurdles. The current workflow often faces challenges with asynchronous data synchronization, state management inefficiencies, and the need for a highly modular Controller-Service-

Repository pattern to ensure data integrity. Additionally, the lack of standardized debugging processes across the client-server boundary frequently results in latent performance issues and communication errors between the frontend and database layers.

Key challenges include:

- Inconsistent API data synchronization between the Java backend and React frontend.
- High complexity in managing React application states during user interactions.
- Difficulties in mapping complex business requirements to structured database entities using Spring Data JPA.
- Inadequate tracing mechanisms for errors occurring across the client-server boundary.

The goal of this report is to evaluate the technical methodologies applied during my internship to solve these integration challenges using React and Java Spring Boot, thereby improving application performance, code maintainability, and the overall reliability of full-stack software solutions.

1.3 Objective

The primary objective of this internship report is to document the technical strategies implemented to overcome the integration and architectural challenges encountered while developing full-stack web applications at LamiraiTech. By analyzing these methodologies, this report aims to demonstrate how to bridge the gap between frontend interfaces and backend services to ensure a more cohesive and efficient development lifecycle.

Specifically, the objectives are to:

- To solve the issue of inconsistent API data synchronization between the Java backend and React frontend.
- To reduce the complexity of managing React application states during user interactions.
- To overcome difficulties in mapping complex business requirements to structured database entities using Spring Data JPA.
- To implement effective tracing mechanisms for errors occurring across the client-server boundary.

Overall, The goal of this report is to evaluate the technical methodologies applied during my internship to solve these integration challenges using React and Java Spring Boot, thereby improving application performance, code maintainability, and the overall reliability of full-

stack software solutions.

1.4 Scope and Limitation

The scope of this internship was focused on the end-to-end development lifecycle of full-stack web applications within the professional environment of LamiraiTech. My responsibilities encompassed the entire technical stack, including the configuration of development environments with tools such as Maven and Git, the implementation of backend business logic using Java Spring Boot, and the design of dynamic user interfaces using React. This work specifically targeted the development, testing, and deployment phases of the YetraSewa, FoodCourt, and Office Management System projects. The primary focus was on establishing efficient data communication protocols and improving modular code structures to ensure that software solutions were both functional and maintainable.

Despite the depth of involvement in these projects, there were several inherent limitations:

- Limited to specific project modules rather than full system ownership.
- Restricted to the company's designated technology stack.
- Access limited to development and staging environments for security reasons.
- High-level architectural decisions remained under senior developer oversight.

Overall, while the internship provided valuable practical experience, these limitations influenced the extent of the improvements made to the core architecture and full-scale deployment of the projects I contributed to.

1.5 Report Organization

The organization of an internship report will depend on the specific requirements and guidelines of the internship program, as well as the nature of the research or analysis being conducted. Here is a general outline of the typical sections that may be included in an internship report:

Chapter 1: Introduction

The first one chapter Outlines the internship background, states the problem, defines the objectives, identifies the scope and limitations, and details the overall report structure.

Chapter 2: Introduction to Organization

This chapter Provides an overview of LamiraiTech, including its organizational structure and core operational domains in software development.

Chapter 3: Background Study and Literature Review

This chapter describe the background study (Description of fundamental theories, general concepts and terminologies related to the project) and literature review (Review of the similar projects, theories and results similar the projects during internship)

Chapter 4: Internship Activities

The intern's roles and responsibilities were clearly defined, including tasks and projects assigned. A weekly log was kept of technical details, including software and tools used, tasks completed, and challenges encountered. The intern was involved in multiple projects, with an overview, objectives, and specific contributions outlined.

Chapter 5: Conclusion and Learning Outcomes

It is a last chapter of this project. In this chapter we discuss the outcome of the project as well as conclusion of the overall project work. Beside that we include future recommendation for this project also.

Chapter 2: Introduction to Organization

2.1 Organizational Details

LamiraiTech Pvt. Ltd. is a dynamic technology firm based in Nepal, dedicated to delivering high-performance digital engineering and tailored IT solutions. The company specializes in full-stack web and mobile application development, robust cloud infrastructure management, and strategic server solutions. Driven by a team of forward-thinking software engineers and IT specialists, LamiraiTech focuses on bridging the gap between complex technical challenges and seamless user experiences. Their mission is to empower businesses through scalable digital products and innovative engineering, ensuring that every solution is optimized for efficiency, security, and long-term growth in an evolving digital landscape.

Table 2-1: Organizational Details

Name:	LamiraiTech Pvt. Ltd. 
Website:	https://www.lamiraitech.com
Email:	kawasoti@lamiraitech.com
Phone Number:	078595085 +9779743948052
Location:	Kawasoti-02, Nawalpur, Nepal

2.2 Organizational Hierarchy

The organizational hierarchy of LamiraiTech Pvt. Ltd. consists of the CEO, who oversees the company's overall operations and strategic decisions. The HR/Manager manages daily operations, project coordination, and team activities. The Developers are responsible for UI/UX designing, Software developing, and maintaining software solutions while guiding the Interns, who assist with project tasks and gain practical industry experience under their supervision. This structure ensures clear communication, efficient workflow, and effective collaboration within the organization.

Figure 2-1: Organization Hierarchy

2.3 Working Domains of Organization

LamiraiTech Pvt. Ltd. is a technology company based in Nepal, composed of talented professionals in Computer Science and Information Technology. The company specializes in a range of digital services, including:

- Website and mobile app development.
- Cloud solutions for individuals and businesses.
- Digital marketing, social media boosting, and UI/UX design.
- Custom web application development and software development.
- Graphic Design, Social Media Content Creation, IT Consulting and Digital Solutions.

LamiraiTech Digital Engineering and IT Solutions aims to provide tailored services to simplify business operations and enhance digital presence.

2.4 Description of the Intern Department

The Intern Department at LamiraiTech Pvt. Ltd. is an important part of the organization that provides practical learning opportunities for students and fresh graduates. The department focuses on bridging the gap between academic knowledge and industry practices by allowing interns to work on real-world projects under the guidance of experienced professionals. It provides a collaborative environment where interns can develop technical, creative, and professional skills while contributing to the company's ongoing projects. Key functions of the intern department include:

- Providing hands-on training and industry exposure.
- Assigning tasks based on interns' skills and interests.
- Supporting project teams in design and development activities.
- Enhancing technical, communication, and problem-solving skills.
- Preparing interns for future professional careers through practical experience.

The department promotes a supportive and professional work culture where interns are encouraged to ask questions, share ideas, and improve through practical experience. Regular interaction with mentors and team members helps interns understand industry workflows, project management practices, and workplace ethics. This environment enables interns to build confidence, strengthen their technical abilities, and prepare themselves for future career opportunities.

In summary, the Intern Department at LamiraiTech Pvt. Ltd. plays a significant role in

developing skilled professionals by providing meaningful learning experiences and practical exposure. It not only supports the organization's ongoing projects but also helps interns grow personally and professionally, making it an essential part of the company's commitment to talent development.

Chapter 3: Background Study and Literature Review

3.1 Background Study

A background study of the full-stack web applications developed during my internship involves researching and analyzing several factors essential for modern software architecture and functionality. Relevant areas include:

- **Full-Stack Development Theory:** Understanding the integration between frontend interfaces and backend server logic.
- **Web Architecture:** Focusing on the technical framework and the MVC pattern (Model-View-Controller) using Java Spring Boot.
- **User Experience (UX) Design:** Considering ease of navigation, responsive UI, and seamless engagement for end-users.
- **Data Management:** Proper handling of application data, entity relationships, and secure storage using MySQL.

Additionally, the study should include:

- Analysis of existing enterprise software architecture trends.
- Trends in API development and efficient frontend-backend communication.
- System requirements for scalability and performance optimization.
- Technical and security requirements for RESTful services.
- Resource allocation for development, testing, and deployment phases.

The general concept of the projects (YetraSewa, FoodCourt, and Office Management System) is to provide centralized, automated platforms for managing specific business processes through robust full-stack integration.

Key features and functions include:

- **API Data Management:** Handling data operations via secure REST endpoints.
- **Dynamic UI:** Building interactive components using React.
- **State & Logic:** Managing sessions, forms, and core business rules.
- **Reporting:** Processing data to generate actionable outputs.
- **System Integration:** Connecting the React frontend to the Java backend for seamless data flow.

3.2 Literature Review

The development of a web application for an educational or professional environment requires integrating modern web technologies, design principles, and the specific needs of its users, such as students, faculty, or e-commerce customers. An institutional or business website serves as an essential platform for delivering information, fostering communication, and improving a digital presence. This literature review explores key concepts, research, and existing models in the field of web development, with a focus on the frameworks used during my internship.

A well-designed website plays a critical role in enhancing the interaction between an organization and its users. The primary function of such a platform is to offer easy access to information, such as course catalogs, product listings, and campus or business activities. According to a study by Imran and Anwar (2016), websites must provide features that enhance both the user experience and engagement, such as news updates, directories, and interactive portals. The importance of user-centric design has been widely recognized in the literature; according to Garrett (2010), clear navigation and aesthetically pleasing layouts significantly contribute to the ease with which visitors can access the information they need.

In the context of software development, the Model-View-Controller (MVC) architectural pattern is widely utilized to build scalable systems. Freeman and Robson (2014) note that the MVC pattern enhances maintainability by decoupling the user interface (View) from the business logic (Model) and the request handling (Controller). This modular approach is essential for managing the complexity of full-stack applications, such as the e-commerce platforms and management systems developed during my internship.

For frontend development, React has become an industry standard due to its component-based architecture. Banks and Porcello (2020) explain that React allows developers to build reusable UI components that manage their own state, leading to highly interactive and responsive user experiences. By utilizing hooks such as `useState` and `useEffect`, developers can efficiently handle complex application logic and asynchronous data updates, which are critical for dynamic web platforms.

Backend architecture, particularly using Java Spring Boot, simplifies the creation of production-grade services. Walls (2016) highlights that Spring Boot's auto-configuration and the controller-service-repository pattern allow developers to focus on business logic rather than boilerplate code. Furthermore, integrating these services via RESTful APIs—which Richardson and Ruby

(2013) emphasize for ensuring seamless interoperability—enables effective data exchange and CRUD operations.

A successful website must also prioritize user experience (UX) to ensure that visitors can easily navigate and find the information they are looking for. Research by Nielsen Norman Group (2020) emphasizes that websites should have intuitive navigation, a responsive design, and accessibility features. Adhering to the Web Content Accessibility Guidelines (WCAG) ensures that websites are usable by all individuals, including those with visual or motor impairments.

Finally, to attract users and improve visibility, effective search engine optimization (SEO) strategies must be implemented. According to Fishkin (2015), SEO is essential for increasing organic traffic and improving search engine rankings. Key strategies include optimizing page titles, descriptions, and content with relevant keywords, ensuring fast page load times, and using mobile-friendly design.

In summary, the development of professional web applications requires careful consideration of design principles, user experience, robust backend architecture, and accessibility. Leveraging modern frameworks like React and Spring Boot, while focusing on SEO strategies and intuitive design, enhances an organization's ability to engage with its audience and provide a seamless digital experience.

Chapter 4: Internship Activities

4.1 Roles and Responsibility

LamiraiTech is a technology company based in Kawasoti-02, Nawalpur, specializing in full-stack web development, API integration, and software solutions. The company is dedicated to offering tailored solutions to clients across various sectors. During my internship, I had the opportunity to work with a team of skilled professionals to develop and maintain platforms such as YetraSewa, FoodCourt, and the Office Management System, which are designed to streamline operations and enhance user engagement.

As an intern at LamiraiTech, my primary responsibility was to assist in the full-stack development and maintenance of these projects, ensuring that they were functional, scalable, and user-friendly. This involved working with a range of tools and technologies to contribute to both the front-end and back-end development of these applications.

In addition to contributing to the development process, I was also involved in the following key responsibilities:

- **Full-Stack Development and Maintenance:** Assisting in the development of projects using React and Java Spring Boot. This included tasks such as designing components, ensuring the interface was responsive, and implementing backend business logic to ensure the applications were fully functional.
- **API Integration:** Helping with the integration of RESTful APIs to facilitate data exchange between the React frontend and Java backend. I assisted in managing asynchronous data requests to ensure that information was presented accurately and efficiently.
- **Collaborating with the Design and Development Team:** Working closely with the development team to ensure the software architecture was sound and in line with project requirements. I also collaborated to ensure the user interface was intuitive and performed optimally.
- **Database Management:** Participating in database efforts to ensure data integrity and efficient storage. This included optimizing database schemas and performing CRUD operations to meet application needs.

- **User Testing and Quality Assurance:** Conducting testing to ensure the application's functionality, and assisting in fixing any bugs or issues found during development. This included testing the responsiveness and data flow across the client-server boundary.
- **Client Communication and Documentation:** Supporting communication by gathering feedback and making adjustments based on project requirements. I also helped document the progress of the projects and reported on key milestones.
- **Learning and Skill Development:** As an intern, I was expected to continuously improve my knowledge and skills related to full-stack development, including learning about new technologies, frameworks, and tools used in these projects.

Through my role at Lamirai Tech, I gained practical experience in React development, Java Spring Boot, and database management, all while collaborating with a dynamic team. The mentorship and hands-on work allowed me to gain a deeper understanding of how modern software is built and maintained.

Overall, my internship allowed me to build a solid foundation in full-stack web development while contributing meaningfully to real-world projects. I was able to apply theoretical knowledge and enhance my practical skills, preparing me for future opportunities in the tech industry.

4.2 Weekly Log

A weekly log for an internship at LamiraiTech serves as a record-keeping tool to track daily activities, tasks, and accomplishments on a week-by-week basis, facilitating communication of progress to the mentor.

Structure of the Weekly Log:

- **Date and Week Number:** Tracks the internship timeline.
- **Tasks and Responsibilities:** Lists specific work performed and new project assignments.
- **Accomplishments:** Highlights notable achievements, project milestones, or new skills acquired.
- **Challenges and Difficulties:** Documents obstacles encountered and the methods used to overcome them.
- **Goals for the Next Week:** Outlines specific objectives planned for the following period.
- **Performance Appraisal by Mentor:** Provides feedback and evaluation from the mentor regarding performance.
- **Observations:** Records notes on performance, team interactions, and overall internship experience.

Table 4-1: Weekly Log Summary

Week	Activity Performed	Outcomes
1	Environment setup, installed Java/Maven, and configured Git repositories.	Proper environment setup ensures consistent development workflows.
2	Analyzed project requirements for YetraSewa; started frontend layout design.	Defined project scope and established responsive base structures.
3	Developed React components for UI; integrated Axios for API communication.	Modular components improve maintainability and UI responsiveness.
4	Built Spring Boot backend; implemented REST controllers for YetraSewa.	RESTful APIs allow seamless frontend-backend data exchange.
5	Implemented Spring Data JPA; handled database mapping and entity relationships.	Efficient database operations ensure data integrity.
6	Designed FoodCourt login and menu interfaces using React.	Intuitive UI improves user experience in the restaurant system.
7	Conducted testing and debugging for FoodCourt module; fixed API synchronization issues.	Bug fixes ensure application stability and reliable performance.
8	Initiated Office Management System database schema design in MySQL.	Normalized schemas support scalable data management.
9	Implemented backend business logic for Office Management System CRUD operations.	Robust logic automates operational workflows.
10	Integrated state management for form data; optimized frontend performance.	Effective state handling enhances application speed and interactivity.
11	Performed integration testing across all projects; conducted security audits.	Thorough testing identifies vulnerabilities and ensures reliability.
12	Finalized project documentation, prepared deployment builds, and reviewed final codebase.	Comprehensive documentation and clean builds prepare projects for deployment.

4.3 Description of the Projects Involved During Interns

During the internship at Lamirai Tech, I worked on the full-stack development of three distinct software platforms: Yetra Sewa, FoodCourt, and the Office Management System. The primary goal of these projects was to design and implement user-friendly, responsive, and robust web applications that automate and streamline specific business operations, ranging from travel booking to food ordering and corporate event scheduling. The projects involved various aspects of full-stack web development, including front-end design using React, back-end API development using Java Spring Boot, state management, and database integration.

Here are some key features that the projects included:

- **User-Friendly Interface:**
 - The applications were designed to provide a clean and intuitive layout, making it easy for users to navigate through various sections.
 - Important functionalities, such as route searching, menu browsing, and calendar viewing, are easily accessible through well-organized component structures.
- **Route and Booking Management (YetraSewa):**
 - A dynamic route listing page was developed, allowing users to view available transports, search by source and destination, and filter by date.
 - A comprehensive booking system was implemented to capture passenger details and generate booking confirmations seamlessly.
- **Menu and Order Management (FoodCourt):**
 - An interactive food menu with category-based filtering was built to enhance the browsing experience.
 - A dynamic cart and checkout system was integrated, allowing users to add/remove items, update quantities, and track their order status.
- **Event Scheduling (Office Management System):**
 - An interactive monthly calendar grid was implemented to track corporate meetings and events.
 - Event detail popup modals and dynamic month navigation were added to improve user interaction without requiring page reloads.
- **Responsive Design:**
 - The web applications were made fully responsive, ensuring an optimal viewing experience on devices of all sizes, from desktops to mobile phones.

- This was achieved using modern CSS techniques to accommodate mobile-first users.
- **Backend Integration and APIs:**
 - The front-end React systems were integrated with Java Spring Boot backend services via RESTful APIs to allow seamless management of data, bookings, and orders.
 - Spring Data JPA was utilized for efficient database mapping, ensuring data integrity for user transactions and records.

As an intern working on these projects, I was responsible for the following:

- **Front-End Development:**
 - Worked on the design and development of the applications' user interfaces using React, JavaScript (ES6+), HTML, and CSS.
 - Helped build reusable UI components (Navbars, Footers, Cards) and managed application state using React hooks like `useState` and `useEffect`.
 - Implemented responsive design to ensure the platforms work well across all devices.
- **Back-End Development & API Integration:**
 - Assisted in creating Java Spring Boot REST controllers to handle GET and POST requests for the applications.
 - Connected the React front-end to the back-end endpoints using Axios, managing asynchronous data flow and error handling.
- **Testing and Bug Fixing:**
 - Worked with the team to conduct end-to-end testing of various features, including the booking flow, shopping cart, and calendar rendering.
 - Assisted in identifying and fixing bugs, such as API synchronization delays and cross-browser CSS inconsistencies.
- **UI/UX Enhancements:**
 - Collaborated during team reviews to implement design improvements, such as adding interactive loading states, order badges, and clear error messages, enhancing the overall user experience.

Working on the YetraSewa, FoodCourt, and OMS projects provided an opportunity to gain hands-on experience in full-stack web development, with a focus on creating scalable and

interactive enterprise platforms. This project allowed me to contribute to various stages of the software development lifecycle, from front-end component design to backend API integration and comprehensive testing. My involvement in these projects has given me valuable insights into the practical aspects of building complex web applications, improving my technical proficiency in React and Spring Boot, and enhancing my understanding of collaborative software engineering.

4.4 Tasks / Activities Performed Project

As a Full-Stack Developer Intern at Lamirai Tech, I was involved in the development and maintenance of three major projects: Yetra Sewa, FoodCourt, and the Office Management System. The goal of these projects was to create responsive, user-friendly, and professional web platforms to streamline business processes, including travel booking, food ordering, and event management. My tasks and activities during this internship primarily focused on utilizing React for the front-end and Java Spring Boot for the back-end to build and manage these applications. Below are the key tasks I performed:

- **Requirements Gathering:** Collaborated with the development team to understand project requirements, study existing codebases, and define technical specifications for new modules.
- **Front-End Development:** Built responsive UI components using React, leveraging functional components, JSX, and React Hooks (useState, useEffect) to ensure an interactive user experience.
- **Back-End Development:** Developed and maintained RESTful APIs using Java Spring Boot, implementing the Controller-Service-Repository architectural pattern to handle business logic and data processing.
- **Database Management:** Designed and implemented MySQL database schemas, including entity creation and repository management using Spring Data JPA for efficient data persistence.
- **API Integration:** Facilitated communication between the front-end and back-end by configuring Axios for HTTP requests, handling data fetching, and managing API response/error states.
- **Testing and Debugging:** Conducted end-to-end testing of features (such as booking flows and cart operations), identified synchronization issues, and performed cross-browser testing to ensure performance and compatibility.

- **Code Maintenance and Documentation:** Performed code cleanups, added inline comments for maintainability, and authored README documentation to ensure clarity for team members.
- **Deployment Support:** Assisted in preparing project builds, fixing environment-related bugs, and participating in final project demonstrations and handover processes.

Throughout my internship at Lamirai Tech, I gained hands-on experience in full-stack development, including front-end component design, back-end API construction, and database management. My work on the YetraSewa, FoodCourt, and Office Management System projects provided me with valuable exposure to the full software development lifecycle, and I was able to contribute to the creation of responsive and functional enterprise-grade applications. This internship enhanced my technical skills in JavaScript, React, and Java Spring Boot while allowing me to collaborate with a team of skilled professionals, ultimately preparing me for future challenges in the software industry.

Chapter 5: Conclusion and Learning Outcome

5.1 Conclusion

Overall, this internship at Lamirai Tech provided a valuable learning experience that helped me develop my skills and knowledge as a Full-Stack Developer Intern. I gained hands-on experience working with React for frontend development and Java Spring Boot for backend architecture, including API integration and database management. Additionally, I learned about RESTful API design, state management, and improving application performance through efficient data flow. Working on the YetraSewa, FoodCourt, and Office Management System projects allowed me to improve my problem-solving skills and broaden my understanding of how to build and maintain scalable enterprise applications. Through various tasks and projects, I identified areas where I need to continue learning and refining my technical skills.

This internship has motivated me to pursue a career in full-stack web development, as it provided me with a solid foundation in modern development frameworks and professional team collaboration.

5.2 Learning Outcome

The internship at LamiraiTech Pvt. Ltd. was a significant opportunity for professional and personal development. Through my role as a Full Stack Developer Intern, I achieved several key learning outcomes:

- Technical Proficiency in Full-Stack Development.
- Understanding of System Architecture and MVC Design Patterns.
- Enhanced Problem-Solving and Debugging Skills.
- Experience in Professional Team Collaboration.
- Mastery of the Full Software Development Lifecycle.
- Proficiency in RESTful API Integration.
- Competence in Database Management and Schema Design.

Week: 1

From: 05-04-2026
To: 11-04-2026

Responsibilities:

- Revise core Java concepts (OOP, collections, exception handling) used in the project backend.
- Revise JavaScript fundamentals and React basics (components, props, state, hooks) relevant to the project.

Activities:

Date	Activities	Remarks
05-04-2026	Visited company, understood team structure and project overview.	
06-04-2026	Revised Java OOP concepts: classes, objects, inheritance, and interfaces as used in Spring Boot.	
07-04-2026	Studied Java collections (List, Map) and exception handling patterns used in the backend.	
08-04-2026	Revised JavaScript features: arrow functions, destructuring, spread operator, and promises.	
09-04-2026	Studied React fundamentals: functional components, JSX, props, state management with useState and useEffect hooks.	
10-04-2026	Holiday	
11-04-2026	Reviewed React Router for navigation and studied how routing is structured in the project.	

Observations:

- Java OOP principles (inheritance and interfaces) are used in the Spring Boot service and repository layers.
- JavaScript ES6+ and React Hooks are used for frontend development.

Next Step:

- Revise Spring Boot annotations (@RestController, @Service, @Repository) and REST API design patterns.
- Practice building small React components and study Axios for HTTP requests used in the project.

Performance Appraisal by Mentor:

Week: 2

From: 12-04-2026

To: 18-04-2026

Responsibilities:

- Revise Spring Boot concepts: annotations, REST API structure, and controller-service-repository pattern.
- Practice JavaScript async/await, Axios HTTP calls, and React component lifecycle used in the project.

Activities:

Date	Activities	Remarks
12-04-2026	Revised Spring Boot annotations: @RestController, @GetMapping, @PostMapping, @Autowired, and @Entity.	
13-04-2026	Studied Spring Boot controller-service-repository layer pattern and how data flows through them.	
14-04-2026	Practiced JavaScript async/await and Promise handling for managing API calls in the frontend.	
15-04-2026	Studied Axios library: making GET and POST requests, handling responses and errors in React.	
16-04-2026	Built small practice React components using useState and useEffect hooks; tested API calls with Axios.	
17-04-2026	Holiday	
18-04-2026	Reviewed overall tech stack understanding with mentor; set up local development environment for the project.	

Observations:

- Understanding Spring Boot's layered architecture makes it easier to navigate and work within the project backend.
- Axios combined with async/await simplifies HTTP communication between React frontend and Spring Boot backend.

Next Step:

- Begin developing assigned frontend components for Yetra Sewa using the React skills
- Study the Java backend API documentation for route and booking endpoints in the project.

Performance Appraisal by Mentor:

Signature:

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 3

From: 19-04-2026
To: 25-04-2026

Responsibilities:

- Set up development environment and explore the Yetra Sewa project structure and codebase.
- Begin building reusable UI components (Navbar, Footer) and the landing page for Yetra Sewa.

Activities:

Date	Activities	Remarks
19-04-2026	Installed VS Code, JDK, Node.js, Maven, and Git; configured local development environment.	
20-04-2026	Cloned Yetra Sewa repository; explored folder structure, routing setup, and existing components.	
21-04-2026	Set up Yetra Sewa frontend locally; reviewed existing React components and pages.	
22-04-2026	Set up Spring Boot backend locally; explored controller, service, and repository layers.	
23-04-2026	Built the Navbar and Footer reusable components for Yetra Sewa in React.	
24-04-2026	Holiday	
25-04-2026	Developed the landing page layout and hero section for Yetra Sewa; attended team meeting.	

Observations:

- Understood the module structure of Yetra Sewa:
- Recognized the clear separation of React frontend and Java Spring Boot backend via REST APIs.

Next Step:

- Build the route listing page with route cards showing source, destination, and timing.
- Add route search and filter functionality and begin connecting the frontend to the Java backend API.

Performance Appraisal by Mentor:

--

Mentor's Approval

Name: Suresh Raj Sharma
Signature:

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 4

From: 26-04-2026
To: 02-05-2026

Responsibilities:

- Develop route listing page and implement route search and filter functionality.
- Connect Yetra Sewa frontend to the Java backend REST API for route data using Axios.

Activities:

Date	Activities	Remarks
26-04-2026	Created route listing page with route cards showing source, destination, and timing.	
27-04-2026	Integrated dummy JSON data into route listing page; tested rendering in browser.	
28-04-2026	Built route search component with source and destination input fields using React state.	
29-04-2026	Added route filter by date and transport type; reviewed Java controller classes for the route module.	
30-04-2026	Connected route listing page to Java backend GET endpoint using Axios; tested data rendering.	
01-05-2026	Holiday	
02-05-2026	Fixed responsive layout issues on route listing and search pages; submitted work for mentor review.	

Observations:

- Reusable React components reduce duplication and keep the Yetra Sewa UI consistent across pages.
- Frontend input validation before API calls reduces invalid data reaching the Java Spring Boot backend.

Next Step:

- Develop booking form UI with passenger details, input validation, and API integration.
- Build booking confirmation page and conduct end-to-end testing of the Yetra Sewa booking flow.

Performance Appraisal by Mentor:

Signature:

Weekly Activity Log Sheet

Name: Sagar Bhattarai

Company: Lamirai Tech

Week: 5

From: 03-05-2026

To: 09-05-2026

Responsibilities:

- Develop booking form UI and connect it to the Java backend API for Yetra Sewa.
- Complete booking confirmation, conduct end-to-end testing, and finalize Yetra Sewa for handover.

Activities:

Date	Activities	Remarks
03-05-2026	Developed booking form UI with passenger details input fields and client-side validation.	
04-05-2026	Connected booking form to Java backend POST endpoint using Axios; handled API response and errors.	
05-05-2026	Built booking confirmation page displaying booked route and passenger details after successful booking.	
06-05-2026	Developed booking history listing page connected to Java backend GET endpoint.	
07-05-2026	Conducted end-to-end testing of route search, booking, and confirmation flow; fixed data formatting issues.	
08-05-2026	Holiday	
09-05-2026	Final review of Yetra Sewa with mentor; fixed remaining bugs and prepared handover notes.	

Observations:

- End-to-end testing of Yetra Sewa revealed edge cases in the booking flow that required careful handling.
- Proper error messages on API failures and clear confirmation pages significantly improve user experience.

Next Step:

- Begin FoodCourt project: review requirements, set up repository, and understand the tech stack.
- Set up FoodCourt React frontend and begin developing the food menu listing and category filter UI.

Performance Appraisal by Mentor:

Signature:

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 6

From: 10-05-2026
To: 16-05-2026

Responsibilities:

- Set up FoodCourt project and develop the food menu listing and category filter UI in React.
- Build the Java Spring Boot REST API for fetching menu items and categories for FoodCourt.

Activities:

Date	Activities	Remarks
10-05-2026	Reviewed FoodCourt project requirements and GitHub repository structure; understood module scope.	
11-05-2026	Set up FoodCourt React frontend project with routing and folder structure.	
12-05-2026	Created Java entity and repository classes for menu items and categories in Spring Boot.	
13-05-2026	Built the food menu listing page UI with category-based display and filtering in React.	
14-05-2026	Developed GET REST API in Spring Boot for fetching menu items and categories.	
15-05-2026	Holiday	
16-05-2026	Connected FoodCourt menu listing page to Java backend API using Axios; tested category filtering in browser.	

Observations:

- FoodCourt's menu listing requires dynamic category filtering, which is well-handled using React state.
- Spring Boot JPA simplifies entity management and database queries for menu and category data.

Next Step:

- Build cart functionality with add/remove item and quantity update features for FoodCourt.
- Develop Java backend service and POST endpoint for cart and order management in FoodCourt.

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 7

From: 17-05-2026
To: 23-05-2026

Responsibilities:

- Develop cart functionality and order placement features for FoodCourt.
- Integrate cart and order placement APIs between React frontend and Java backend.

Activities:

Date	Activities	Remarks
17-05-2026	Built cart component with add/remove item and quantity update functionality using React state.	
18-05-2026	Added cart item count badge on the Navbar; implemented persistent cart state across pages.	
19-05-2026	Created Java Order entity, service layer, and POST endpoint for order placement in Spring Boot.	
20-05-2026	Built checkout UI with order summary and delivery details form; applied input validation.	
21-05-2026	Connected checkout form to Java order placement API; handled success and error responses.	
22-05-2026	Holiday	
23-05-2026	Tested cart and order placement end-to-end; fixed cart state reset issue after successful order.	

Observations:

- Managing cart state in React requires careful handling to keep the UI in sync with user actions.
- The Java service layer clearly separates order business logic from the controller, making the code maintainable.

Next Step:

- Build order history listing page with order status display for FoodCourt.
- Improve FoodCourt UI responsiveness, conduct cross-browser testing, and finalize code for handover.

Signature:

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 8

From: 24-05-2026
To: 30-05-2026

Responsibilities:

- Build order history listing page and conduct cross-browser testing across all FoodCourt pages.
- Finalize FoodCourt with code cleanup, README and documentation.

Activities:

Date	Activities	Remarks
24-05-2026	Developed order history listing page connected to Java backend GET endpoint for FoodCourt.	
25-05-2026	Added order status display (pending, confirmed, delivered) on history page; improved UI responsiveness.	
26-05-2026	Conducted full end-to-end testing of FoodCourt: menu, cart, checkout, and order history.	
27-05-2026	Fixed bugs found during testing; cleaned up React component code and added inline comments.	
28-05-2026	Cleaned up Java backend code; ensured consistent API response structure and wrote README documentation.	
29-05-2026	Holiday	
30-05-2026	Final review of FoodCourt with mentor; completed handover and joined Office Management System team meeting.	

Observations:

- Order status display helps users track their food orders and significantly improves the overall app flow.
- Cross-browser testing exposed minor CSS inconsistencies that required fixes before final handover.

Next Step:

- Begin Office Management System onboarding: review codebase, team structure, and assigned module.
- Understand the calendar page requirements and data structure for events and meetings

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 9

From: 31-05-2026
To: 06-06-2026

Responsibilities:

- Understand Office Management System architecture and calendar page requirements.
- Begin building the calendar page UI in React.

Activities:

Date	Activities	Remarks
31-05-2026	Reviewed Office Management System codebase and team-assigned module structure.	
01-06-2026	Studied calendar page requirements: monthly view, event markers, and navigation.	
02-06-2026	Set up calendar page component structure in React within the existing project.	
03-06-2026	Implemented calendar grid with correct day alignment for monthly view.	
04-06-2026	Added month navigation (previous/next) using React state.	
05-06-2026	Holiday	
06-06-2026	Reviewed calendar grid with team; noted feedback on layout and navigation behavior.	

Observations:

- Building a calendar grid from scratch in React requires precise date calculation logic for correct day alignment.
- Month navigation driven by React state updates renders the calendar dynamically without any page reload.

Next Step:

- Integrate event data from the Java backend API into the calendar page.
- Display event markers on calendar dates and build an event detail popup modal for clicked dates.

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 10

From: 07-06-2026
To: 13-06-2026

Responsibilities:

- Integrate event data into the calendar page from the Java backend.
- Display event markers and build event detail modal for the calendar.

Activities:

Date	Activities	Remarks
07-06-2026	Connected calendar page to Java backend GET endpoint for fetching events by month.	
08-06-2026	Rendered event markers on calendar dates based on fetched event data.	
09-06-2026	Built event detail popup modal triggered on clicking a date with events.	
10-06-2026	Handled loading and empty states for months with no events.	
11-06-2026	Fixed date comparison logic to correctly match events to calendar day cells.	
12-06-2026	Holiday	
13-06-2026	Tested calendar with multiple events on same date; fixed modal display issues.	

Observations:

- Event markers require careful date normalization to avoid timezone and format mismatch issues.
- Popup modals for event details improve usability without navigating away from the calendar.

Next Step:

- Improve calendar page responsiveness and apply feedback from team review.
- Polish calendar UI styling to match the Office Management System design system and submit for team review.

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 11

From: 14-06-2026
To: 20-06-2026

Responsibilities:

- Finalize calendar page UI, fix responsiveness, and submit for team review.
- Prepare project documentation.

Activities:

Date	Activities	Remarks
14-06-2026	Fixed responsive layout of calendar page for mobile and tablet screens.	
15-06-2026	Polished calendar styling to align with the Office Management System design system.	
16-06-2026	Submitted calendar page to team; addressed review feedback and applied corrections.	
17-06-2026	Documented calendar page component structure, props, and API integration.	
18-06-2026	Began writing report covering Yetra Sewa, FoodCourt, and calendar contributions.	
19-06-2026	Holiday	
20-06-2026	Completed internship report draft; reviewed with mentor for final feedback.	

Observations:

- Team code review for the calendar page highlighted areas for better component reusability and cleaner prop passing.
- Documenting component structure, props, and API integration ensures smooth handover and future maintainability.

Next Step:

- Submit all final deliverables: code, documentation, and internship report.
- Prepare final demo presentation for all three projects.

Weekly Activity Log Sheet

Name: Sagar Bhattarai
Company: Lamirai Tech
Week: 12

From: 21-06-2026
To: 27-06-2026

Responsibilities:

- Submit all final project deliverables and report.

Activities:

Date	Activities	Remarks
21-06-2026	Final code review and cleanup of all three project contributions.	
22-06-2026	Submitted Yetra Sewa frontend code and documentation.	
23-06-2026	Submitted FoodCourt project code and GitHub README documentation.	
24-06-2026	Submitted Office Management System calendar page code and documentation.	
25-06-2026	Presented all three projects to mentor and received final evaluation.	
26-06-2026	Holiday	
27-06-2026	Submitted final report and completed all formalities.	

Observations:

- Working across three real-world projects deepened practical understanding of React, JavaScript, and Java Spring Boot as a full-stack combination.
- Team-based development on the Office Management System provided practical experience in collaborative workflows, code reviews, and modular feature delivery.

Next Step:

- Apply full-stack skills (React + Java Spring Boot) in personal projects and continue building on the internship experience.
- Continue improving expertise in React component design, Java backend architecture, and REST API best practices.
